Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_YingxianLi

Cluster Monitor [GitHub]:

- Built a Linux-based cluster monitoring agent that collects host CPU/memory/disk metrics and stores them in PostgreSQL.
- Automated metric collection with Bash scripts and scheduled jobs, enabling near real-time visibility into server health.
- Wrote SQL queries to analyze resource usage trends and support capacity planning.

RDBMS and SQL [GitHub]:

- Designed an ERD and implemented a relational schema using PostgreSQL DDL with primary/foreign keys and constraints.
- Wrote optimized SQL queries (joins, aggregates, subqueries, CTEs, window functions) to answer business questions.

Core Java Apps [GitHub]:

- Twitter App: Curabitur laoreet tristique leo, eget suscipit nisi. Sed in sodales ex. Maecenas vitae tincidunt dui, et eleifend quam.
- JDBC App: Curabitur laoreet tristique leo, eget suscipit nisi. Sed in sodales ex. Maecenas vitae tincidunt dui, et eleifend quam.
- Grep App: Built a Java CLI app that mimics Linux **grep** by recursively scanning directories, matching lines using regex (**Pattern**), and writing results to an output file; improved scalability by streaming file contents line-by-line instead of loading whole files.
